4. **Cross Browser and Parallel Test**
   - In my current project, we use sauceLab for cross browser testing. But my previous project I used testng.xml file.
   - Basically, inside the suite there are 3 keys (name, thread count, parallel) and I created 2 different tests, one of them is for
   - Chrome and the other one is for Firefox.
   - There is also parameter annotation and include name and value; name is browser and value is Chrome.

```xml
<?xml version="1.0" encoding="UTF 8"?>
<!DOCTYPE suite SYSTEM ...>
<suite ...>
   <test name="ChromeTest" ... >
           <parameter name="browser" value="chrome"/>
                   <classes>
                           <class name="testsuite..."/>
                   </classes>
   </test> <!   First Test   >
   <test name="FireFox" ... >
           <parameter name="browser" value="FireFox"/>
                   <classes>
                           <class name="testsuite…."/>
                   </classes>
   </test> <!   Second Test   >
</suite> <!   Suite   >
```
